CRA Starter Package for Module B

Prepare for CRA compliance by December 2027

Assess your portfolio strategy, common compliance approach, product evidence and vulnerability handling processes, with a separate final conformity assessment where required.

Non-compliance with key CRA requirements can result in administrative fines of up to €15 million or 2.5% of total worldwide annual turnover, whichever is higher.

Why Brightsight?

Active role in standardization

Brightsight actively participates in industry working groups, providing early insights into emerging standards and their alignment with future Harmonised Standards.

Notified Body

A one-stop shop for CRA conformity assessment, covering Modules B and H, with Notified Body capabilities and processes aligned with ISO/IEC 17065 and ISO/IEC 17021.

Reuse of existing evidence

Brightsight can leverage relevant existing evaluation evidence for CRA compliance, including evidence from EUCC, NIAP CC, PSA Certified, SESIP, OCP S.A.F.E., GSMA NESAS, PCI PTS, EMVCo, FIPS and other schemes.

Consistency and governance

A clear and consistent approach to interpreting CRA requirements, ensuring alignment across evaluations and transparent decisions.

A comprehensive CRA assessment package

1 Compliance strategy assessment

We assess how you classify and group products, select representative products, identify the appropriate conformity assessment routes, and review opportunities to reuse existing documentation and evidence. We also review the common methods, templates, rules and controls used across the portfolio, applying the approach to a representative product or worked example to assess how it works in practice.
You receive: Compliance Strategy Assessment Report

2 Product assessment

We review the product's technical documentation, security risk assessment, security claims and available supporting evidence. The assessment covers the relevant product configurations within the agreed scope and can be repeated for additional products.
You receive: Product Assessment Report

3 Vulnerability handling process assessment

We assess processes for vulnerability monitoring, intake, triage, remediation, updates, disclosure and CRA reporting. We also review how these processes are applied to the selected product, including dependencies and its Software Bill of Materials (SBOM).
You receive: Vulnerability Handling Assessment Report

4 Module B conformity assessment

Following the relevant technical assessments, the Notified Body reviews the manufacturer's documentation, available assessment reports and supporting evidence. The Notified Body then performs the applicable conformity assessment activities and takes an independent decision.
You receive: The applicable Notified Body report, decision or certificate, depending on the conformity assessment route.

Assessments are limited to the agreed scope. The manufacturer remains responsible for its compliance strategy, documentation and corrective actions. Brightsight reports findings without designing solutions or guaranteeing portfolio-wide compliance. Existing evidence may be reused where applicable, while new testing is scoped separately. Assessment against a draft standard does not provide presumption of conformity and may require a later gap assessment. The final Notified Body decision is taken independently from the technical assessment.
