The new MPoC standard combines three standards into one – PCI SPoC, PCI CPoC and ‘Tap to Phone’ pilot standards for payment networks. It is expected to stimulate developments and growth in software-based payment solution deployments by offering an industry-wide standard that can be adopted by associated international payment networks.

In November 2022, the Payment Card Industry Security Standards Council (PCI SSC) introduced its new Mobile Payments on COTS (commercial off-the-shelf) security standard for devices such as smartphones and tablets. PCI MPoC is the natural successor to the various ‘Tap to Phone with PIN’ pilot programs used by payment networks. ‘Tap to Phone with PIN’ pilot programs have been very successful but will be discontinued by the end of 2023 and so new solutions must now achieve PCI MPoC approval.

MPoC introduces new certification options (certification of components) and new payment functionalities. This enables tailoring in line with market demands for EMV card types (contact, contactless, MSR) or with/without PIN, etc.

Limitless world-wide deployment is possible after achieving PCI MPoC solution approval and so, whether you are a software developer, an SDK provider or a back-end provider in the payment ecosystem, compliance with the MPoC standard is crucial when delivering the highest level of security to your valued customers.

Brightsight has maintained a strong and collaborative partnership with PCI for more than 15 years. Our expertise in conducting thorough security evaluations results in high-quality reports that lead to official certification from PCI. We are one of the first recognized PCI MPoC laboratories in the world and can offer comprehensive solutions to help you successfully access target markets with MPoC security compliant mobile payment solutions, enabling risk mitigation and limitless worldwide deployment.

OUR SERVICES

As a PCI MPoC recognized laboratory, we offer comprehensive services to support you throughout all phases of the evaluation and certification process, enabling you fast-track time to market. Our scope encompasses the full range of consultancy, pre-assessment and evaluation services, supporting you on your certification journey from start to finish.

PRE-EVALUATION

Our comprehensive pre-evaluation training and consultancy services help manufacturers and developers gain a better understanding of PCI MPoC requirements as they pertain to their products. This will reduce the potential for failure during formal security evaluations.

- Workshops/training – introduces all the essential elements one needs to know prior to starting PCI MPoC development. Training focuses on the technical aspects of the program

- Ongoing developer advisory support
 - expert assistance through activities such as consultancy related to design reviews, document checks and ad-hoc questions with the aim of readiness for product approval
- GAP analysis – identify which aspects of your implementation process need to be revised/extended in order to become PCI MPoC compliant
- Readiness validation
 - performed in a mature development stage to spot obvious security non-compliance issues in the design and documentation phase before the start of the formal MPoC security evaluation

SECURITY EVALUATION

The PCI MPoC Standard provides flexibility in mobile payments acceptance and mobile payment acceptance solutions development by allowing the approval of four different types of MPoC products.

We offer full PCI MPoC security evaluations for:

- MPoC software security evaluation
- MPoC monolithic security evaluation
- Attestation & Monitoring (A&M) environment security evaluation
- Solution integration evaluation:
 - Isolated SDK or non-isolated SDK
 - Certified A&M or dedicated A&M

WHY CHOOSE BRIGHTSIGHT AS YOUR SECURITY LABORATORY?

With over 40 years of experience in cybersecurity and a growing global network of specialist testing facilities, Brightsight is the world's number one security evaluation service provider with over 700 security evaluations completed every year. Our dedicated team of security experts specialize in software-based security evaluations and we understand the technical requirements of the PCI MPoC standard and have the capabilities in place to help you deliver cybersecure products to global markets. Brightsight is your first choice for independent testing and developer support services when you want to efficiently deliver secure and compliant software-based payment solutions.
